## **EXAMINER'S AMENDMENT**

### ***Election/Restrictions***

1. This application is in condition for allowance except for the presence of claims 10-13 directed to invention(s)/specie(s) non-elected without traverse. Accordingly, claims 10-13 have been cancelled.
2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

- Claims 10-13 have been cancelled

### ***Reasons for Allowance***

3. The following is an examiner's statement of reasons for allowance: The prior art, Makoto et al. (JP7035455), disclose a compressor, a cooling fan for a compressor, a temperature sensor for physically measuring the temperature of the compressor, a temperature sensor at the discharge pipe of the compressor, and operates the cooling fan based on the temperature reading from the temperature sensors. Makoto et al. do not anticipate nor render obvious to turn on the cooling fan responsive to a determination that the air temperature is equal to or greater than the first temperature and that a temperature difference between an inlet and an outlet of at least one evaporator is less than a predetermined value. The prior art, Fujiwara (6,041,608),

Art Unit: 3744

teaches low temperature refrigerating device having small refrigerating capacity and operating a fan if a detected temperature is greater than a set temperature. Fujiwara does not anticipate nor render obvious to have a cooling fan arranged to cool a compressor and a controller configured to turn on the cooling fan responsive to a determination that the air temperature is equal to or greater than the first temperature and that a temperature difference between an inlet and an outlet of at least one evaporator is less than a predetermined value. The prior art, Yabuta et al. (JP5087432), Disclose a refrigerator that comprises a compressor, a cooling fan arranged to cool the compressor, and operates the fan when the temperature in the refrigerator detected by a temperature sensor becomes beyond a predetermined value. Yabuta et al. do not anticipate nor render obvious to have a controller configured to turn on the cooling fan responsive to a determination that the air temperature is equal to or greater than the first temperature and that a temperature difference between an inlet and an outlet of at least one evaporator is less than a predetermined value. Claims 14-18 are allowable because the prior art of record does not anticipate nor render obvious the combination set forth in the independent claim 14, and specifically does not show a refrigeration system using a hydrocarbon-based cooling comprising a compressor, a cooling fan arranged to cool said compressor, a controller configured to stop the cooling fan in response to a determination that the air temperature is less than a first temperature, the controller is also configured to start the cooling fan response to a determination that the air temperature is equal to or greater than the first temperature and that a temperature difference between an inlet and an outlet of at least one evaporator is less than a

predetermined value, said cooling fan operates to heat the hydrocarbon-based cooling medium at least to a temperature that reduces an amount of the hydrocarbon-based cooling medium dissolved in the machine oil to a level that reduces a sleeping phenomenon of the hydrocarbon-based cooling.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
